CHAPTER - 7 FUNCTION AND PERFORMANCE TESTING

7.1 -Types of Software Testing

Testing Type	Purpose
Unit Testing	Tests individual components or modules (e.g., inventory update logic, alert triggers)
Integration Testing	Ensures different modules (e.g., inventory + supplier + reporting) work together correctly
System Testing	Validates the complete system against requirements in a real-world scenario
Functional Testing	Verifies that features like stock tracking, expiry alerts, and reordering work as expected
Usability Testing	Checks user experience, interface design, and ease of navigation for pharmacists and staff
Security Testing	Ensures sensitive data (e.g., patient-linked inventory) is protected and access is controlled
Performance Testing	Evaluates system speed, responsiveness, and stability under load (e.g., bulk inventory updates)
